YCANTH® Patient Treatment Guide

Expect a call from YcanthRx™ Pharmacy to fill your YCANTH prescription

If you do not receive a call, please reach YcanthRx Pharmacy at (855)-922-6847 to arrange your prescription.

During the call, YcanthRx Pharmacy may:

- Verify your insurance coverage.
- Enroll you in the YCANTH Copay Program*.
- Request permission to transfer your prescription to a dispensing pharmacy.

YCANTH is to be administered by healthcare professionals only, and will be shipped directly to your provider's office for your next appointment.

YCANTH cannot be picked up from the pharmacy by a patient or caregiver.

What To Do After Treatment

Wash all treatment sites 24 hours after treatment (or sooner if directed by your healthcare provider) with a gentle soap and water.

- Avoid washcloths or abrasive surfaces.
- You may wash YCANTH off of your skin sooner if directed by your healthcare provider, or if severe application site reactions occur.

Avoid creams, lotions, oils, and sunscreen on the treated skin.

- These products should not be applied for 24 hours or until after washing the affected and treated skin.

If discomfort occurs, over-the-counter medicine such as acetaminophen or ibuprofen can be taken as needed.

To report SUSPECTED ADVERSE REACTIONS, contact Verrica Pharmaceuticals Inc. at 1-877-837-7422 or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

The formation of a blister at the treatment site is an expected response to YCANTH treatment.*

**Local skin reactions are expected and should be reported if they are severe.*

These images represent some of the lesions of a YCANTH-treated patient in a phase 3 study—individual results may vary.

What to Expect Post Treatment:

After treatment: If you experience discomfort, you can use an over-the-counter pain medication. Blisters form within 24 to 72 hours.

The next few days: Avoid squeezing, "popping," or scratching any blisters, as they could become infected.

Seven to 14 days after treatment: If scabs form at the treatment sites, try to avoid picking or scratching—removing the scab can increase the risk of scarring.
